Orange Coast College
08/2019 - 11/2021

PROJECTS

Personal Website & Portfolio

webdevlex.com

05/2021 - Current

- Developed and maintain website using modern HTML, CSS, and JavaScript techniques
- Ensured optimization and fast performance using Parcel web application bundler to build website for production
- Ensured consistent and responsive page appearance/behavior across multiple browsers and screen sizes using CSS media queries
- Decreased website load time by creating optimized custom SVG illustrations and animations using Figma

React Web Application

Whoo

09/2021 - Current

- Designed and developed the web application using React Javascript framework, managed the state through Redux and enforced industry code standards to ensure maintainability and extendibility
- Designed a responsive and intuitive user interface using CSS media queries and Flexbox to allow cross platform accessibility to the website on any browser, device or screen size
- Designed and integrated a database using MongoDB, Node JS, Express, and RESTful design patterns that leveraged the React architecture to display user information and simplified the submission of user data by implementing React-Hook-Forms
- Ensured security through the encryption of user passwords using bcrypt and protected private routes using JSON Web Tokens for authentication
